

UKLA in conjunction with the Health and Safety Executive launch MWF guidance DVD for end-users

UKLA together with the HSE have launched a DVD aimed at users of metalworking fluids. The DVD provides guidance on BEST PRACTICE for the safe use, maintenance and testing of metalworking fluids to ensure that machinists are not exposed to unsafe conditions and fluid life is not curtailed by poor maintenance practices.

The quickest and easiest way to obtain a copy of the DVD is to contact your MWF-PSG fluids supplier, who can provide your company with a copy.

We suggest you check that your supplier is a member of the UKLA MWF Stewardship Group by looking them up on the [**UKLA MWF User Information**](#) web pages.

Also, we will be putting in place a way for users to be able to obtain a copy of the DVD through the UKLA Secretariat.
