

Certificate of **Lubricant Competence**

A complete basic lubricant training programme designed, developed and delivered by leading industry experts.

Modules include:

1. Exploration & Refining
2. Base Oil Types and Characteristics
3. Basic Tribology
4. Lubricant Additives
5. Automotive Lubricants
6. Industrial Lubricants
7. Greases
8. Metalworking
9. Health, Safety & Environment
10. Certification Session

COURSE SUMMARY

UKLA is offering the opportunity to enrol in a one-year course of up to 10 modules which will provide an excellent foundation in the lubricants industry.

Certification is achieved only on completion of the whole course: candidates attending all 9 taught modules over one or two consecutive years will be eligible to sit the final exam and achieve certification. Attendance of specific individual modules is also always available.

THE COURSE CONTENT

Covering the fundamentals of exploration, manufacture and formulation of lubricants and greases together with their uses and final disposal of the used lubrication products, including the Health, Safety and Environmental issues lubricants and greases create.

Each module looks at the application, regulation and market developments affecting each area of lubrication. Modules are led by an industry expert in that particular field. We are in the privileged and unique position to be able to offer you the best industry experts for each module keeping the course relevant and up to date with current legislation and market developments. Please see below for a detailed outline of each module.

WHO SHOULD ATTEND?

This course is primarily aimed at those who want to gain a thorough grounding in lubricants and lubrication. Plus, those who need to improve their skills and understanding by being brought up-to-speed on all the relevant information pertinent to the UK & European lubricants markets. It also provides a perspective on the global lubricant market.

This course would especially benefit newcomers and recently promoted lubricants personnel, or those who feel they would like to broaden their knowledge, e.g. technical and non-technical personnel, sales and marketing, customer support, legal and lubricants distribution staff.

COURSE FEES

Fees are payable in advance and cover attendance and delegates' notes for each module. Please note, travel and accommodation costs are not included in the fees.

UKLA Member Prices

Single Module £275 excl. VAT
10 Module Course £2475 excl. VAT

(Pay for nine modules and the Certificate Session is free)

COURSE DETAILS

There is an end of unit test for each of the nine modules; candidates wishing to gain certification may also attend a free of charge final exam –so long as all nine modules have been completed in a period of two consecutive years or less.

The exams are held on 'an open book exam' basis, with delegates being evaluated on understanding rather than recall and memorization.

THE CERTIFICATE

The pass mark for Certification is 50%, with 'Distinction' set at 75% or above. Marks are weighted equally from attendance, individual module test marks and the final examination mark. Full briefing notes are provided and we can also arrange catch-up sessions to enable delegates to stay on track for Certification.

REGISTERED LUBRICANT PROFESSIONAL

On successful completion of the course, delegates working in UKLA member companies are eligible to apply for Registered Lubricant Professional status. This professional designation is awarded to those individuals who are committed to aspiring to the highest standards of lubricant practice and commits the individual to undertaking 35 hours of structured Continuing Professional Development each year to maintain their designation. For 2017 we are offering all delegates completing the full certification course one year's complimentary membership of the Registered Lubricant Professional programme.

For more information visit www.ukla.org.uk/registered-lubricant-professional-cpd/

THE TRAINERS

Mr. Rod Pesch, CChem, MRSC.

Rod has a long service history in the oil industry, amounting to 47 years and still counting! Starting in 1965 with "Regent Oil" (forerunner of Texaco), Rod has worked in Technology, Marketing, Sales, Chemicals/Additives, OEM Liaison, Global Product Line Management and Global Marketing.

Dr. Ted Wright.

Following a period of research at Cambridge, Ted joined the Esso Research Centre and was responsible for electron microscopy and all aspects of elemental analysis. Moving into lubricants his positions within Esso included quality control, marketing and procurement. For a number of years he was on assignment as Technical Manager at Comma Oil. Ted is still very much involved in the lubricants industry especially with training and consults on problem solving. He also serves on the Technical Review Panel of the VLS scheme.

Alan Outhwaite, Base Oil Business Development, Chevron.

Alan joined Chevron International Oil Company, in the UK in 1994 as a product engineer responsible for automotive and industrial lubricants, supporting Chevron's business in Russia, CIS and East Europe. Following Chevron's merger with Texaco, Alan moved to the commercial side of the business. In 2005 he joined Chevron's Global Base Oil team as Business Development Manager, responsible for Chevron's base oil strategy in Europe, a role he continues whilst supporting growth objectives in Asia.

Gautier Perrin, Field Engineer, Total Lubricants UK.

Gautier came to Total with an academic understanding of Chemistry and 2 MSC degrees starting with Total UK in February 2015 as a Graduate Trainee Field Engineer. He became a Field Engineer within 1 year of joining Total UK and is now part of the Total worldwide technical support network.

Caroline Slinn MChem.

After graduating from York University with a degree in Chemistry including a year in Europe (Münster, Germany) Caroline joined Polartech Ltd. as a technical service and then later development chemist, focusing on metalworking fluids. After a period working for Batoyle Freedom Group, Caroline joined Afton Chemical in a laboratory based role as a Customer Technical Service Specialist within the metalworking team supporting the customers and sales team, particularly in the Germany region. Caroline also sits on the UEIL HSE committee that meets three times a year and provides regular feedback to the UKLA European Policy Update meetings.

Dr. Tim Hutchings CChem MRSC: Technical Manager, RS Clare Ltd.

Tim has worked in the oil industry, for Castrol, Exxon, Infineum, SKF, petroleum technology and RS Clare, the entire period has been spent in technology. He has predominantly; developed lubricants for industrial, automotive and marine applications, deployed additives for engine oils, and developed and recommended greases for use in bearings.

Ian Harris - Application Specialist, Houghton Steve Rushton, Application and Support Specialist at Houghton International PLC.

Houghton International is a global leader in delivering advanced metalworking fluids and services for the automotive, aerospace, metals, mining, machinery, offshore and beverage industries.

Module 1

23rd February 2017

EXPLORATION & REFINING

Covering the basic geology and formation of oil bearing strata, the geographical distribution of known oil reserves, the history of exploration, the formation of the Major Oil companies and a brief Industry history, refining and the progression of refinery technology from initial techniques through to current trends in modern technology.

Presented by: Rod Pesch

Module 2

30th March 2017

BASE OIL TYPES & CHARACTERISTICS

Concentrating on the way refining and crude oil origin defines the characteristics and properties of the resulting base oil and their subsequent best use. Covering areas such as Pour Point, Volatility, Oxidation Stability and the advantages and disadvantages of base oil's various properties to different types of blended lubricants.

Presented by: Alan Outhwaite

Module 3

27th April 2017

BASIC TRIBOLOGY

This course module is designed to give a basic understanding of concepts such as ElastoHydroDynamic Lubrication, Boundary Lubrication and Extreme pressure conditions. This module also covers Anti-Wear, Fretting Corrosion and Tool Life in the context of the later course elements.

Presented by Dr. Ted Wright

Module 4

25th May 2017

LUBRICANT ADDITIVES

An explanation of the basic additives used in the various categories of lubricants, their chemistry at a simplistic level, their function and their performance in respect of the Tribology covered in the previous element. This should not only relate to additives used in Automotive and basic Industrial lubricants, but should draw parallels with specialist areas such as Grease and Metalworking.

Presented by Infineum.

Module 5

29th June 2017

AUTOMOTIVE LUBRICANTS

An enormous topic covering not only engine oils for both gasoline and diesel engines, but transmission and hydraulic applications in addition. Following on from the additive module this session will highlight the application of the different additive chemistries, relating both types and treat rates to levels of performance and specifications. The history of specifications up to and including the latest ACEA performance levels will be covered.

Presented by Dr. Ted Wright.

Module 6

20th July 2017

INDUSTRIAL LUBRICANTS

A comprehensive look at Hydraulic and Circulatory, Gear Oils, Open Gears, Slideway Oils etc. including particularly the importance of viscosity, and additive selection and relating strongly to both the Tribology and Additive elements. Basic guidance on selection of the correct lubricant and the importance of the Lubrication Survey and Rationalisation are included.

Presented by Gautier Perrin, Total UK Ltd

Module 7

28th September 2017

GREASES

A science in itself, the use of grease, its different manufacturing considerations, additive types and the basic terminologies of Consistency, Penetration, Drop Point etc. are covered.

Presented by Dr Tim Hutchings, RS Clare.

Module 8

19th October 2017

METALWORKING

Metalworking Fluids have become an increasingly important part of the product portfolio of most lubricant companies. This element explores the basic differences in chemistry and application between neat and watermix fluids, explains emulsions and emulsifiers at a simplistic level, covers the additive technology and different tribological implications when related to the previous modules. It provides a thumbnail sketch of the industries, which form the potential customer base.

Presented by Houghton International.

Module 9

23rd November 2017

HEALTH, SAFETY & ENVIRONMENTAL

This module covers the evolution of the Health and Safety of ingredients, risk assessment and a hands-on workshop to practice the technique. Risks from heavy metals, such as lead, together with the associated risks of using certain chemical components in formulations, such as sodium nitrite etc. in various categories of lubricants are addressed. It will also cover other issues such as biocides, middle order metals and discussing environmental legislation and trends. During this session other aspects are also covered relating to biodegradable lubricants, vegetable and ester basestocks and fluids used in the environment. The DVD on the Safe Handling of Metalworking Fluids produced by the UKLA Metalworking Fluids Products Stewardship Group in conjunction with HSE will also feature in this module.

Presented by Caroline Slinn, Afton Chemical.

Module 10

7th December 2017

FINAL SESSION

The final module includes a one and half-hour comprehensive examination, covering all the work covered in each module and an industry related final lecture, by a senior industry presenter. The day concludes with a formal presentation to students of the UKLA Certificate of Lubricant Competence. Two levels of pass are provided, 'Pass' and 'Distinction'.
